

## AVIATION WEATHER FORMAT

### METAR / TAF

#### METAR

**METAR (or SPECI for Special Report) KPIT 201955Z (AUTO for automated observation) (COR for correction to observation) 22015G25KT 3/4SM R28R/2600FT TSRA OVC010CB 18/16 A2992 RMK SLPO13 T01760158**

**Note: When METAR data is missing from the body of the report (e.g. dew point), it is simply omitted and the user must know the sequence to recognize this. Some exceptions apply in remarks such as RVRNO, or SLPNO when RVR or SLP are normally reported but not currently available.**

To help remember the sequence, think of 3W's at the beginning-  
**Where, When, and Wind** This works for METAR as well as TAF!

**METAR KPIT 201955Z 22015G25KT**

#### **WHERE**

**KPIT** is the ICAO station identifier. The usual 3 letter identifiers we are all familiar with are now preceded by a "K" for the contiguous United States. Alaska and Hawaii will use 4 letter identifiers beginning with "PA" and "PH" respectively.

## WHEN

201955Z is the **20th** day of the month.

201955Z at **1955Z** time

## WIND

22015G25KT is reported as the 3 digit true direction to the nearest 10 degrees. (Note: ATC towers, ATIS and airport advisory service report wind as *magnetic*.)

22015G25KT next is the 2 or 3 digit speed.

22015G25KT a "G" comes next if the wind is gusting.

22015G25KT followed by the 2 or 3 digit maximum speed and units (KT).

**0000KT** for calm winds.

22015KT **180V260** When wind direction varies 60 degrees or more and wind is greater than 6 knots.

**VRB** Used when wind direction is variable and speed is less than or equal to 6 knots.

**RMK** Peak wind is one element reported in the remarks section whenever the maximum instantaneous speed is greater than 25 knots. **22030/15** means a maximum instantaneous wind of **30** knots occurred **15** minutes past the hour from **220** degrees. **PK WND 22030/15**

## VISIBILITY

**3/4SM** meaning 3/4 statute mile visibility. Miles and fractions are also reported (e.g., **3/4SM** for **2 and 3/4** statute miles visibility).

**R28R/2600FT** Means Runway Visual Range (RVR). Signifies that the runway visual range for runway **28 Right is 2600 feet**. The format is **R(XXX)** Runway Designator including **(L)**eft **(C)**enter or **(R)**ight **/(XXXX)** 4 digit visibility in feet.

Some coding pilots may also see for RVR include:

**M** Indicates that RVR is less than lowest reportable sensor value (e.g. **M0600FT**)

**P** Indicates RVR greater than highest reportable sensor value (e.g. **P6000FT**).

**V** Variable If the RVR is variable between 2000 and 4000 feet for runway 6L: **(R06L/2000V4000FT)**. May contain up to four RVR reports.

## SIGNIFICANT PRESENT WEATHER

**TSRA: Thunderstorm/Moderate Rain** Format is a two character descriptor (e.g. TS, SH, DR) sometimes followed by a two character weather phenomenon (e.g. RA, SN, FG). (See Abbreviations Section). Intensity or proximity of weather phenomenon:

"-" **Light**

"+" **Heavy**

"no sign" **Moderate**

"VC" **In the vicinity**

## CLOUDS

**OVC010CB**: Specifies cloud amount, height, and type. **Overcast** clouds are present at 1000 feet consisting of **umulonimbus** clouds.

Cloud height is reported in hundreds of feet. When clouds are composed of towering cumulus or cumulonimbus **TCU** or **CB** will follow cloud height.

The clouds are categorized based on eighths (octas) of the sky:

**SKC** Sky Clear  
**FEW** >1-2 octas  
**SCT** 3-4 octas  
**BKN** 5-7 octas  
**OVC** 8 octas

**VV** may be listed here for **indefinite ceiling** such as "**VV004**" for **Vertical Visibility 400 feet**.

**18/16: Temperature/Dew Point** listed in degrees Celsius. When temperatures are below zero degrees Celsius, they are preceded by "**M**" for **Minus** (e.g., **10/M06 for temperature 10 degrees C, dew point Minus 6 degrees C**).

**A2992 Altimeter Setting "A"** indicates setting in **inches** of mercury for United States. Consists of 4 digits: inches and hundredths.

**RMK SLP013 T01760158**

**RMK** SLP013 T01760158. **Remarks** come last.

RMK **SLP013** T01760158. Selected stations will contain **SLP** for **Sea Level Pressure** reported as the last three digits in hectoPascals (millibars) to the nearest tenth (e.g., 1001.3 is reported as **SLP013**).

RMK SLP013 **T01760158**. Also, at selected stations, the 9 character code (**T01760158**) breaks down the temperature and dew point to the nearest 1/10th of a degree Celsius. The "**T**" stands for temperature and the "**0**" means positive temperature. A "**1**" in place of the "**0**" stands for negative temperature. At selected stations, other temperature codes, such as **0142**, **20012**, or **401120084**, may appear to document temperatures not related to aviation.

## **METAR ON ASOS/AWOS**

ASOS/AWOS reports will also use METAR/SPECI code formats. An ASOS/AWOS report can be identified by the term **A01** or **A02** (see abbreviations in back cover) in the remarks (RMK) section. Example:

**METAR KOFK 251955Z AUTO 30008KT 10SM CLR 22/10 A3010 RMK A02 SLP138 T02180096**

Some ASOS/AWOS sites are attended. When a site is attended, the term **AUTO** is not included in the report (**A01** or **A02** remain). An attended site may contain information that has been manually provided by the observer.

**Only a fully automated site without human intervention will contain the word AUTO.**

When ASOS/AWOS reports sky condition is **clear (CLR)** it means no clouds at or below 12,000 feet.

## TAF

TAF (TAF AMD is Amended Forecast when included)  
KPIT 091730Z 091818 22020KT 3SM -SHRA BKN020

**FM2030 30015G25KT 3SM SHRA OVC01 5 TEMPO 2022 1/2SM  
TSRA OVC008CB**

**FM0100 27008KT 5SM -SHRA BKN020 OVC040 PROB40 0407  
00000KT 1SM -RA BR**

**FM1000 22010KT 5SM -SHRA OVC020 BECMG 1315 20010KT  
P6SM NSW SKC**

Once you know how to pick out the TAF forecast time periods, the same logical sequence that we saw in METAR will follow. Below, a TAF is broken down to highlight its individual segments. Key words, and their definitions, indicating a new time period has started are highlighted in **bold print**.

## TAF

KPIT 091730Z 091818 22020KT 3SM -SHRA BKN020

**FM2030 30015G25KT 3SM SHRA OVC015 WS015/30045KT  
TEMPO 2022 1/2SM TSRA OVC008CB**

**FM2300 27008KT 5SM -SHRA BKN020 OVC040 PROB40 0407  
00000KT 1SM -RA BR**

**FM1000 22010KT 5SM -SHRA OVC020 BECMG 1315  
20010KT P6SM NSW SKC**

The **Where, When, and Wind** trick works with TAF, too. There's a little twist with the "when," however.

## TAF

KPIT 091730Z 091818 22020KT

### Where

**KPIT** is the ICAO station identifier. The usual 3 letter identifiers are preceded by a "K" for the contiguous United States. Alaska and Hawaii use 4 letter identifiers beginning with "PA" and "PH" respectively.

### When

**091730Z** This is the forecast for the **9th** day of the month with an issuance time of **1730Z** or UTC. This is a 2 digit date and 4 digit time.

**091818** is the valid period with the first two digits containing the day of the month (**09**).

**091818** the second two digits specify the hour beginning the forecast period (**1800Z**).

**091818** the last two digits are the hour ending the forecast period (**1800Z** on the next day the 10th).

**Wind 22020KT** See description under **METAR**

**WS015/30045KT** means at 1500 feet we expect wind to be **300** degrees at **45 KT**. This indicates low level wind shear, not associated with convective activity.

**Time Periods, etc.**

**FM2030** From **2030Z** or UTC time. Indicates hours and minutes.

**TEMPO 2022** Temporary changes expected between **2000Z** and **2200Z**

**FM2300** FROM 2300Z.

**PROB40 0407** There is a **40 percent probability** of this condition occurring between **0400Z** and **0700Z**.

**FM1000** FROM 1000Z.

**BECMG 1315** Conditions **Becoming** as described between **1300Z** and **1500Z**

Once the specific time periods can be discerned, the sequence of **wind, visibility, significant weather, cloud cover and cloud height** follows and is repeated for each time block. The only exception is after qualifiers such as **PROB40, TEMPO, and BECMG**, some of the components may be omitted if these are not expected to change. Notice after **TEMPO 2022**, there is no wind given and after **PROB40 0407**, there is no cloud cover listed. Note: When No Significant Weather (**NSW**) appears it only indicates obstruction to visibility or precipitation previously noted has ended. (See Abbreviation Section)

## **INTERNATIONAL DIFFERENCES**

Pilots and operators who fly to international destinations are cautioned to be alert to differences between U.S. METAR/TAF and international METAR/TAF. Some key differences follow:

### **Altimeter Setting**

The United States reports the altimeter setting in inches of mercury (e.g., **A2992**) and internationally it will be listed in ectoPascals (millibars) (e.g., **Q1016**).

### **Wind**

Internationally, wind may be reported in knots (KT), kilometers per hour (KMH) or meters per second (MPS). Appropriate units are indicated on both METAR and TAF.

### **Wind Shear**

Low level wind shear, not associated with convective activity (e.g., **WS015/30045KT** see TAF) will appear in TAFs in the United States, Canada, and Mexico only.

### **Visibility**

Internationally, visibility is reported in 4 digits using meters with the direction of the lowest visibility sector (e.g., 6000SW - meaning visibility is lowest at 6000 meters to the southwest). In the United States, we use prevailing visibility, in statute miles, not the lowest visibility, so the same conditions would be reported differently.

International visibility reports also contain a trend such as:

- D** Down
- U** Up
- N** No change
- V** Variable

## OTHER

Remarks (**RMK**) included in U.S. METAR are transmitted to only Canada and Mexico and no other international stations.

Pilots may also see the notation on International METAR/TAF: **CAVOK**. This means ceiling and visibility OK and is used to replace weather and clouds if visibility is 10 kilometers or more, there are no clouds below 1500 meters (5000 feet) or below the highest minimum air traffic control sector altitude, whichever is greater. Also, there must be no other significant weather. **NSC** means no significant clouds.

International TAF's may include temperature, turbulence, and icing forecasts.

## METAR TAF - Abbreviations

Abbreviations	
AO1	Automated Observation without precipitation discriminator (rain/snow)
AO2	Automated Observation with precipitation discriminator (rain/snow)
AMD	Amended Forecast (TAF)
BECMG	Becoming (expected between 2 digit beginning hour and 2 digit ending hour)
BKN	Broken 5-7 octas (eighths) cloud coverage
CLR	Clear at or below 12,000 feet (ASOS/AWOS report)
COR	Correction to the observation
FEW	1 or 2 octas (eighths) cloud coverage
FM	From (4 digit beginning time in hours and minutes)
LDG	Landing
M	In temperature field means "minus" or below zero
M	In RVR listing indicates visibility less than lowest reportable sensor value (e.g. M0600)
NO	Not available (e.g. SLPNO, RVRNO)
NSW	No Significant Weather. Note: NSW only indicates obstruction to visibility or precipitation previously noted has ended. Low ceilings, wind shear, and other weather conditions may still exist.
OVC	Overcast 8 octas (eighths) cloud coverage
P	In RVR indicates visibility greater than highest reportable sensor value (e.g. P6000FT)
P6SM	P6SM Visibility greater than 6 SM (TAF only)
PK	WND Peak wind
PROB40	Probability 40 percent
R	Runway (used in RVR measurement)
RMK	Remark

RY/RWY	<b>Runway</b>
SCT	<b>Scattered 3-4 octas (eighths) cloud coverage</b>
SKC	<b>Sky Clear</b>
SLP	<b>Sea Level Pressure (e.g., 1001.3 reported as 013)</b>
SM	<b>Statue Mile(s)</b>
SPECI	<b>Special Report</b>
TEMPO	<b>Temporary changes expected (between 2 digit beginning hour and 2 digit ending hour)</b>
TKOF	<b>Takeoff, T01760158, 10142, 20012 and 401120084. In Remarks-examples of temperature information</b>
V	<b>Varies (wind direction and RVR)</b>
VC	<b>Vicinity</b>
VRB	<b>Variable wind direction when speed is less than or equal to 6 knots</b>
VV	<b>Vertical Visibility (Indefinite Ceiling)</b>
WC	<b>Wind shear (In TAFs, low level and not associated with convective activity)</b>

<b>Descriptors</b>	
BC	<b>Patches</b>
BL	<b>Blowing</b>
DR	<b>Low Drifting</b>
FZ	<b>Supercooled/Freezing</b>
MI	<b>Shallow</b>
PR	<b>Partial</b>
SH	<b>Showers</b>
TS	<b>Thunderstorm</b>

<b>Weather Phenomena</b>	
BR	<b>Mist</b>
DS	<b>Dust Storm</b>
DU	<b>Widespread Dust</b>
DZ	<b>Drizzle</b>
FC	<b>Funnel Cloud</b>
+FC	<b>Tornado/Water Spout</b>

FG	<b>Smog</b>
FU	<b>Smoke</b>
GR	<b>Hail</b>
GS	<b>Small Hail/Snow Pellets</b>
HZ	<b>Haze</b>
IC	<b>Ice Crystals</b>
PE	<b>Ice Pellets</b>
PO	<b>Dust/Sand Whirls</b>
PY	<b>Spray</b>
RA	<b>Rain</b>
SA	<b>Sand</b>
SG	<b>Snow Grains</b>
SN	<b>Snow</b>
SQ	<b>Squall</b>
SS	<b>Sandstorm</b>
UP	<b>Unknown Precipitation (Automated Observations)</b>
VA	<b>Volcanic Ash</b>

<b>Cloud Types</b>	
CB	<b>Cumulonimbus</b>
TCU	<b>Towering Cumulus</b>

<b>Intensity Values</b>	
(-)	<b>Light</b>
No Sign	<b>Moderate</b>
(+)	<b>Heavy</b>

**Converting Celsius into Fahrenheit is easy.**

Double the Celsius temperature. Then subtract 10% of the doubled temperature. Finally add 32. You now have the equivalent Fahrenheit temperature.

**Example:**

To determine the Fahrenheit equivalent of 15°C

$$\begin{aligned}
 15^{\circ}\text{C} \times 2 &= 30^{\circ}\text{C} \\
 30^{\circ}\text{C} \times 10\% &= 3^{\circ}\text{C} \\
 30^{\circ}\text{C} - 3^{\circ}\text{C} &= 27^{\circ}\text{C} \\
 27^{\circ}\text{C} + 32 &= 59^{\circ}\text{F}
 \end{aligned}$$

## **METAR (SPECI or Special Report)**

(Note: These examples are used as a quick reference tear off page in the booklet.)

**Note:** When METAR data is missing (e.g. dew point), it is simply omitted and the user must know the sequence to recognize this. Some exceptions apply in remarks such as RVRNO, or SLPNO when RVR or SLP are normally reported but not currently available.

**METAR KPIT 201955Z 22015G25KT 3/4SM R28R/2600FT TSRA OVC010CB 18/16  
A2992 RMK SLP013 T01760158**

Where: **KPIT**

When: **201955Z** 20th day of month at 1955Z

Wind: **22015G25KT** 220 degrees at 15 gusting to 25 knots

V: Variable direction e.g., 20015KT 220V280

VRB: Variable direction when speed is less than or equal to 6 knots

Visibility: **3/4SM** 3/4 statute miles, typical: 2 3/4SM, 1SM

RVR: **R28R/2600FT** Runway 28 Right visibility 2600 feet

M: Used for RVR less than lowest reportable sensor value (e.g. **M0600FT**)

P: Used for RVR greater than highest reportable sensor value (e.g. **P6000FT**)

V: Variable

Significant Weather: **TSRA** thunderstorm/moderate rain (See Abbreviations)

Sky Condition: **OVC010CB** overcast clouds at 1000 feet consisting of cumulonimbus

Typical: **SKC, FEW, SCT, BKN, VV004** indefinite ceiling (Vertical Visibility) 400 feet

Temperature/Dew Point: **18/16** 18 degrees Celsius/dew point 16 degrees Celsius

M: Minus (below zero)

Altimeter: A2992 inches of mercury and preceded by an "A"

**RMK SLP013 T01760158 10142 20012 401120084** At selected stations, Sea Level Pressure is reported as the last three digits in hectoPascals (millibars) (e.g., 1001.3 is reported as **SLP013**). Codes such as T01760158 10142 20012 and 401120084 are climate temperature information.

**TAF (AMD is Amended Forecast when included)**

**KPIT 091730Z 091818 22020KT 3SM -SHRA BKN020 WS015/30045KT**

**FM2030 30015G25KT 3SM SHRA OVC015 TEMPO 2022 1/2 TSRA OVC008CB**

**FM1000 22010KT 5SM -SHRA OVC020 BECMG 1315 20010KT P6SM NSW SKC**

Where: **KPIT**

When: **091730Z** issuance day and time: 9th day at 1730Z

**091818** valid period: 9th day at 1800Z to next day (10th) at 1800Z

Wind: **22020KT** 220 degrees at 20 knots

Visibility: **3SM** 3 statute miles, typical - **2 3/4SM, 1SM,**  
**P6SM:** Greater than 6 statute miles

Significant WX: - **SHRA** light rain showers (See Abbreviations)

Sky Condition: **BKN020** broken clouds at 2000 feet

Typical: **FEW, SCT, BKN, OVC.**

**VV004** indefinite ceiling (Vertical Visibility) 400 feet. **CB** and **TCU** clouds noted when present.

Wind Shear: **WS015/30045KT** low level wind shear at 1500 feet forecast to be 300 degrees at 45 knots (only nonconvective, low level, wind shear is forecast)

Sequence of Wind, Visibility, Significant Weather and Sky Condition repeats preceded by:

**FM2030:** From 2030Z

**TEMPO 2022:** Temporarily between 2000Z and 2200Z.

**FM2300:** From 2300Z

**PROB40 0407:** There is a 40 percent probability between 0400Z and 0700Z

**FM1000:** From 1000Z

**BECMG 1315:** Becoming between 1300Z and 1500Z

Note: Weather conditions such as wind and sky condition may be omitted **after PROB40, TEMPO, and BECMG** if no change is expected from those same conditions given in the previous time block.
